

**Date:** June 5, 2025  
**To:** Buckman Direct Diversion Board  
**From:** Matthew Sandoval, BDD Operations Superintendent  
**Subject:** Update on BDD Operations for the Month of May 2025

**ITEM:**

1. This memorandum is to update the Buckman Direct Diversion Board (BDDDB) on BDD operations during the month of May 2025. The BDD diversions and deliveries have averaged, in Million Gallons Per Day (MGD), as follows:
  - a. Raw water diversions: 9.57 MGD
  - b. Drinking water deliveries through Booster Station 4A/5A: 8.65 MGD
  - c. Raw water delivery to Las Campanas at BS2A: 0.87 MGD
  
2. The BDD provided approximately 86% of the water supply to the City and County for the month.
  
3. The BDD year-to-date diversions are depicted below:

## Regional Water Overview

Daily metered regional water demand for the month of May 2025 was approximately: 9.9 MGD

Rio Grande flows for May 2025 averaged approximately 1014 CFS (cubic feet per second).

ity/County/Las Campanas Storage- as updated by partners. As of May 27, 2025 City of SF Abiquiu SJC storage is at about 6,444 AF.

## Regional Water Supply

CRWTP reservoir storage: Nichols: 0% McClure: 56.9% Watershed Inflow: 4.41 MGD

- Santa Fe SNOTEL
  - Cumulative snow Water/Equiv. Inches 0.1
  - Cumulative Snow in Depth in Inches 0

## Current Rio Grande Watershed Snowpack Storage Data:

The Current Upper Rio Grande Basin Index is currently 1% (provisional data) of the historic median value for Snow Water Equivalent (SWE) and 73% of the historic median value for precipitation meaning that snow storage in this basin has diminished and precipitation has been lower than normal. BDD will need to be strategic with how it diverts and stores water as flows in the Rio Grande are anticipated to be low.

## Current El Niño Southern Oscillation (ENSO) Status Summary

The current ENSO (El Niño-Southern Oscillation) status, as of May 29, 2025, is ENSO-neutral. This is based on recent data indicating that sea surface temperatures (SSTs) in the Niño-3.4 region of the equatorial Pacific are close to the long-term average, with a value of approximately  $-0.01^{\circ}\text{C}$  for the week ending May 18, 2025, and  $-0.10^{\circ}\text{C}$  for April 2025. Neutral conditions are defined by SST anomalies between  $-0.5^{\circ}\text{C}$  and  $+0.5^{\circ}\text{C}$  (or  $-0.8^{\circ}\text{C}$  to  $+0.8^{\circ}\text{C}$  per some agencies like the Bureau of Meteorology).

Additional indicators support this status: atmospheric convection, trade winds, and the Southern Oscillation Index (SOI) are near average, with no strong signals of El Niño or La Niña. Forecasts from multiple sources, including NOAA's Climate Prediction Center and the International Research Institute for Climate and Society, suggest that ENSO-neutral conditions are likely to persist through at least August-October 2025, with a 74% chance during June-August. There is some uncertainty beyond this period, with a slight increase in the probability of La Niña (up to 31% by August-October) compared to El Niño, but neutral remains the most probable outcome.

## Seasonal Precipitation and Temperature Outlooks:

The current precipitation outlook is equal chances for the region while the current temperature outlook is above average for the region. Maps of this forecast are pictured below.
